

Director Handover Guide

Domain **cotewall-mews.ltd** · Directors email **directors@cotewall-mews.ltd**

Security: Never store passwords, MFA seeds, recovery codes, API tokens, or payment card / PayPal details in this guide, in Git, on the website, or in ordinary kDrive folders.

This guide is for a future director with little technical knowledge. It explains how the Society's digital administration works and how to hand it on cleanly.

1 What Infomaniak services the Society uses

SERVICE	PURPOSE
Domain cotewall-mews.ltd	Society web address and email domain
Web Hosting (Node.js)	Hosts the Residents' Handbook website
kSuite Essential	Mail, kDrive and collaboration for the organisation
Email	Permanent Society mailbox directors@cotewall-mews.ltd
kDrive	Shared document repository
SSL	HTTPS for the website

Provider: Infomaniak (Swiss). Management console: manager.infomaniak.com

2 The domain

Production domain: **cotewall-mews.ltd**

Website: <https://cotewall-mews.ltd/>

Do not point this domain elsewhere without Society agreement.

3 The directors' email

Permanent public address: **directors@cotewall-mews.ltd**

Use this for routine Society correspondence. It is the authoritative record of resident–director email. Do **not** auto-forward all Society mail to personal inboxes as the default arrangement.

4 How directors gain access to the mailbox

1. Each director should have their **own** Infomaniak login (named user).
2. Access to directors@ is granted by **sharing** that mailbox with their Infomaniak user (no shared password).
3. Open Infomaniak Mail (mail.infomaniak.com or kSuite Mail).
4. Switch address (chevron top-left) to directors@cotewall-mews.ltd when working as the Society.
5. Send from directors@ so replies stay on the Society record.

If invited as an external user, accept the Infomaniak invitation email first, then the shared mailbox appears.

5 How the kDrive structure works

Root folder: **CO-OWNERS MAINTENANCE SOCIETY**

1. Governing Documents
2. Accounts & Finance (by year; bank statements split Directors-original vs Residents-published)
3. Running Costs (by year)
4. Meetings (AGM / other residents / directors)
5. Companies House & Statutory Records
6. Property & Maintenance
7. Insurance (by year)
8. Digital Services & Administration (registers, handover, renewals)

Historical bulk scanning of old paper archives is **not** required. Focus on the present directors' tenure; add older material only when important or already digital.

6 Which material residents can see

Residents sign in on the website with their registered apartment email and get **read-only** access to the Society document library (published accounts, AGM papers, insurance schedules, and other agreed transparency documents).

Residents must **not** edit, delete, upload into official folders, or change permissions.

Directors-only material (unredacted bank statements, claims with personal data, directors' meeting notes, Digital Services & Administration) is hidden from resident accounts automatically. There must be **no public kDrive share** on the Society root.

7 How to add a new director

1. Invite them as an Infomaniak Organisation user (Administrator or User with required product rights).
2. Enable MFA on their account.
3. Share `directors@cotewall-mews.ltd` with them.
4. Grant appropriate kDrive write/manage access to Society folders.
5. Enable billing/renewal notification preferences if they should receive Infomaniak service alerts.
6. Update the website emergency contacts table if phone/email change.
7. Update Companies House / Society records as required by law (separate from Infomaniak).

8 How to remove an outgoing director

1. Remove their access to `directors@` (Shared with).
2. Revoke kDrive permissions.
3. Remove or downgrade their Infomaniak Organisation / kSuite role.
4. Remove pending invitations if any.
5. Update website emergency contacts.
6. Confirm they no longer receive billing/admin notifications unless still appropriate.
7. Do **not** ask for their password — revoke access instead.

9 Who controls the organisation-level account

Infomaniak provides a **Legal Representative** role with highest authority (products, users, accounting, recovery).

As of the initial setup, the Legal Representative was the Infomaniak account used to create the organisation.

The Legal Representative should remain a Society-controlled designation, not a permanent personal entitlement of one director. When that person leaves, transfer Legal Representative status using Infomaniak's official process **before** removing their access.

10 How renewals work

Domain, hosting, and kSuite were prepaid for a multi-year term (around five years from September 2026, with renewals around September 2031).

Infomaniak can send renewal and invoice reminders to users who are allowed to receive billing communications. Prefer **multiple directors** receiving those alerts so the Society does not depend on one person checking the Directors mailbox.

11 Where renewal dates are recorded

See kDrive: *08 – Digital Services & Administration / Renewal Information* and the Digital Services Register in the same area.

12 How the website links to kDrive

The handbook at cotewall-mews.ltd/handbook includes **Society documents**. There is no shared library password. Each resident and director signs in with their registered email; on first visit they set a personal password (12+ characters). Forgotten-password emails are sent from directors@cotewall-mews.ltd.

The Node app lists and streams files from kDrive using a server-side API token (`cotewall-library`). There must be no public kDrive share link on the Society root.

- Directors see the full tree (including bank statements and folder 08).
- Residents do not see bank statements or Digital Services & Administration.
- Directors can open the access log at `/library-log` (directors only).
- Library data lives in a persistent host directory so passwords and the log survive git rebuilds.

Source code / deploy: GitHub repository connected to Infomaniak Node.js hosting (`npm install / npm start`).

13 How to update emergency contact details

1. Edit `public/index.html` in the website repository (Contacts section).
2. Commit and push to the connected GitHub branch.
3. Rebuild/restart the Node.js site in Infomaniak if auto-deploy does not run.
4. Spot-check the live Contacts section.

14 How to update the normal Directors contact information

The permanent Society address is always **directors@cotewall-mews.ltd**. If that address ever must change (rare), update the mailbox / aliases in Infomaniak Mail, the website mailto links, and any letterheads / AGM notices.

Do not replace it with a personal email as the public Society address.

15 Credentials are not stored in the document repository

Use a proper password manager / Infomaniak account recovery / MFA recovery codes stored offline or in a dedicated secure vault agreed by the directors.

This guide must never contain passwords, MFA seeds or recovery codes, PayPal / card numbers, or API tokens.

16 Transferring control when the principal account owner changes

1. Ensure at least two administrators understand the process.
2. Appoint the incoming Legal Representative in Infomaniak **before** the outgoing person loses access.
3. Transfer billing notification rights.
4. Confirm payment method is still valid (ideally a Society card, not a personal PayPal long-term).
5. Re-verify MFA and recovery options for remaining privileged users.
6. Revoke the outgoing director's access only after the above succeed.
7. Record the change date in the Digital Services Register (no secrets).
